WHATSNEXTVISIONMOTORS-SALESFORCE IMPLEMENTATION

UserStory:

WhatsNext Vision Motors is a Salesforce-based automotive CRM solution designed to centralize vehicle, dealer, customer, order, test-drive, and service-request information. The project focuses on improving the customer ordering process and streamlining operational activities through Salesforce data modelling, Lightning App Builder, record-triggered Flow, Apex and trigger automation, Batch Apex, Scheduled Apex, and synchronous/asynchronous Apex.

1. INTRODUCTION

Business Overview

The system provides a connected Salesforce environment for managing the core activities of an automotive business. Vehicle and stock information can be maintained along with dealer, customer, order, test-drive, and service-request records. The solution uses Salesforce objects and relationships to keep these activities connected and visible from a common Lightning application.

The implementation also addresses operational rules such as checking vehicle availability before an order is confirmed, assigning a suitable dealer based on customer location, supporting Pending and Confirmed order states, and automating reminders and replenishment-related notifications.

Purpose

- Centralize vehicle, dealer, customer, order, test-drive, and service-request data in Salesforce.
- Improve the customer ordering workflow using connected records and automation.
- Prevent orders from being processed when the requested vehicle is out of stock.
- Support dealer assignment based on the customer's location.
- Automate test-driver reminders and operational notifications.
- Use Salesforce automation and reporting capabilities to reduce repetitive manual work.

Objectives

- Build a structured automotive CRM using Salesforce objects and relationships.
- Create a Lightning application with navigation for major automotive business functions.
- Implement stock validation and order-status management.
- Automate business actions using Flow, Apex, triggers, Batch Apex, and Scheduled Apex.
- Provide a foundation for future analytics, service management, and scalable CRM operations.

2. IDEATION PHASE

Problem Statement

User / Area	Need	Operational Challenge
Customer	Place a vehicle order	An order should reflect current vehicle availability
Sales / Dealer Team	Manage customers and dealers	Customer location and dealer information need to stay
Vehicle Operations	Maintain vehicle stock	Out-of-stock vehicles should not proceed normal.
Test Drive Team	Coordinate test drives	Upcoming test drives require timely reminders.
Service Team	Track service requests	Customer service activity should be maintained CR

Solution Approach

Approach	How it handles the requirement	Key limitation / consideration
Manual records	Separate records for vehicles, customers, and orders.	Higher manual effort and weaker
Spreadsheets	Track stock and orders in tabular form.	Manual synchronization and limited
Custom web application	Build all automotive modules independently.	Requires separate development, hog
Salesforce CRM	Use connected objects, Lightning UI, Flow, Apex, etc.	Required

Selected Platform – Salesforce

- Connected data: Customer, Vehicle, Dealer, Order, Test Drive, and Service Request records can be related.
- Process automation: Flow and Apex can enforce business rules and automate notifications.
- Stock control: Order processing can check vehicle availability before confirmation.
- Dealer support: Customer location can be used for dealer assignment.
- Scalability: Additional objects, automation, reports, and integrations can be added later.

3. REQUIREMENT ANALYSIS

Business Requirements

- Maintain vehicle information including model, price, stock, and availability.
- Maintain dealer information including location/address and related customer operations.
- Maintain customer information and connect customers to orders, test drives, and service requests.
- Create and manage vehicle orders with order date and order status.
- Use Pending and Confirmed order states as part of the order workflow.
- Prevent an order from proceeding when the selected vehicle is out of stock.
- Assign a suitable/nearest dealer based on customer location.
- Manage test-drive scheduling and reminder notifications.
- Maintain service requests for customer support and after-sales activities.

Functional Requirements

FR No.	Requirement
FR-01	The system shall allow users to create and manage vehicle records.
FR-02	The system shall maintain dealer records and their locations.
FR-03	The system shall maintain customer records.
FR-04	The system shall create and manage vehicle orders.
FR-05	The system shall validate stock availability during order processing.
FR-06	The system shall support Pending and Confirmed order statuses.
FR-07	The system shall support dealer assignment using customer location.
FR-08	The system shall manage test-drive records and reminders.
FR-09	The system shall maintain vehicle service requests.
FR-10	The system shall support reports/dashboards for operational visibility.

Non-Functional Requirements

NFR	Description
NFR-01 Usability	Provide a clear Lightning interface for automotive operations.
NFR-02 Security	Control access through Salesforce security and user permissions.
NFR-03 Data Accuracy	Use validation and automation to maintain consistent records.
NFR-04 Reliability	Automations should execute consistently when their conditions are met.
NFR-05 Maintainability	Keep Flow, Apex, triggers, and configurations structured for maintenance.
NFR-06 Scalability	Support additional vehicles, customers, dealers, orders, and service activity.

4. DATA MODEL & SALESFORCE OBJECTS

Core Objects / Modules

Object / Module	Purpose
Vehicle	Stores vehicle model, price, stock, and availability information.
Dealer	Stores dealer information and location used for operational assignment.
Customer	Stores customer details and location information.
Order	Stores vehicle-order details, order date, selected vehicle/customer/dealer, and status.
Test Drive	Stores test-drive scheduling and related customer/vehicle information.
Service Request	Stores customer service and after-sales requests.

Data Relationships

- Customer→Order:connectsthecustomertoavehiclepurchaserequest.
- Order→Vehicle:identifiestheselectedvehicleandenablesstockvalidation.
- Order→Dealer:connectstheordertotheassigneddealer.
- Customer→TestDrive:linkstest-driveactivitytothecustomer.
- Customer→ServiceRequest:linksafter-salessupportactivitytothecustomer.

Business Flow

Customer	Order Request	Stock Validation	Dealer Assignment	Order Status
Customer details	Vehicle + date	Available / Out of Stock	Location-based dealer	Pending / Confirmed

The implementation is designed around a connected customer-order-stock-dealer flow. The supplied Salesforce screenshots show the Developer Edition environment, the user profile, and the WhatNext Vision Motors Vehicles module.

5. PHASE 2 – SALESFORCE DEVELOPMENT &AUTOMATION

Lightning App &Navigation

The WhatNext Vision Motors Lightning application provides navigation for the major CRM areas. The supplied application screenshot shows Vehicles, Vehicle Dealers, Vehicle Customers, Vehicle Orders, Vehicle Test Drives, Vehicle Service Requests, Reports, and Dashboards as navigation items.

Automation Components

Component	Role in the project
Record-Triggered Flow	Automates business actions when relevant Salesforce records are created or updated.
Apex / Triggers	Supports stock checks, order-related business rules, and operational automation.
Trigger Handlers	Organize trigger logic for maintainability.
Batch Apex	Supports processing of larger record sets and scheduled operational tasks.
Scheduled Apex	Runs recurring automation such as reminders or periodic processing.
Sync / Async Apex	Supports immediate and background processing where required.
Lightning App Builder	Provides the application-level user interface and navigation experience.

Key Automation Scenarios

- Stockvalidation:checkwhethertheselectedvehiclehasavailablestockbeforeorderconfirmation.
- Ordercontrol:maintainPendingandConfirmedstatushandling.
- Dealerassignment:usecustomerlocationinformationtoidentifyanappropriatedealer.
- Test-driverreminder:automateremindercommunicationforupcomingtestdrives.
- Replenishment/ordernotifications:supportnotificationsrelatedtostockandorderoperations.

6. PHASE3–UI/UXDEVELOPMENT&SALESFORCE CONFIGURATION

Salesforce Setup / Developer Edition

Figure6.1–SalesforceDeveloperEditionSetupHomeusedforprojectconfiguration.

The screenshot shows the Salesforce Developer Edition Setup environment used to manage and customize the org. The Setup navigation includes administration and platform tools used during configuration.

Salesforce User Profile

Figure6.2–SalesforceuserprofilepageshowingtheprojectuserinDeveloperEdition.

The supplied screenshot shows the user profile area with the Salesforce Developer Edition environment and profile details. This page is part of the Salesforce identity and user-management experience.

WhatNext Vision Motors – Vehicles Module

Figure6.3–WhatNextVisionMotorsLightningAppwiththeVehiclesmoduleselected.

The screenshot shows the custom Lightning application named WhatNext Vision Motors. Its navigation includes Vehicles, Vehicle Dealers, Vehicle Customers, Vehicle Orders, Vehicle Test Drives, Vehicle Service Requests, Reports, and Dashboards. The Vehicles list is currently empty in the supplied screenshot.

7. PHASE 4 – TESTING, DATA & SECURITY

Testing Areas

Test Area	Expected Behaviour
Vehicle Stock Check	Out-of-stock vehicle should not proceed through the normal confirmation path.
Order Status	Order workflow should maintain the defined Pending / Confirmed states.
Dealer Assignment	Customer location should support selection of an appropriate dealer.
Test Drive Reminder	Reminder automation should run for eligible upcoming test drives.
Service Request	Service records should remain linked to the correct customer context.
Lightning Navigation	Major modules should be reachable from the WhatNext Vision Motors app.

Data Management

- Vehicle, dealer, customer, order, test-drive, and service-request records form the operational dataset.
- Data should be validated before use in automation and reporting.
- Salesforce records and relationships provide the central source for CRM activities.

Security & Access

- Salesforce user and permission controls are used to manage access to CRM data.
- Object and record access should follow the responsibilities of the relevant users.
- The project uses the Salesforce security model as the foundation for controlled access.

8. ADVANTAGES & LIMITATIONS

Advantages

- Centralized CRM data for vehicles, dealers, customers, orders, test drives, and service requests.
- Automation reduces repetitive manual operations.
- Stock validation supports controlled order processing.
- Location-based dealer assignments support customer-order coordination.
- Lightning navigation provides a single application entry point for core modules.
- Apex, Flow, Batch Apex, and Scheduled Apex provide multiple automation mechanisms.
- The solution can be expanded with additional Salesforce modules and integrations.

Limitations / Scope Considerations

- The supplied screenshots represent a Salesforce Developer Edition environment.
- The Vehicles list in the supplied screenshot contains 0 items at the time of capture.
- Production deployment details are not established by the supplied screenshots.
- Real-world deployment would require environment-specific data, security review, testing, and release management.

9. CONCLUSION

The WhatsNext Vision Motors project demonstrates how Salesforce can be configured as an automotive CRM platform. The project brings together vehicle inventory, dealers, customers, orders, test drives, and service requests in a connected Salesforce environment. The implementation uses Lightning App Builder, record-triggered Flow, Apex and triggers, Batch Apex, Scheduled Apex, and synchronous/asynchronous Apex to support the operational workflow.

The supplied Salesforce screenshots provide visual evidence of the Developer Edition Setup environment, the user profile, and the WhatNext Vision Motors Vehicles module. Together with the project design, these screenshots demonstrate the Salesforce environment and application structure used for the implementation.

10. FUTURE SCOPE

- Add richer inventory dashboards and sales analytics.
- Expand dealer location and customer assignment capabilities.
- Add advanced order tracking and notification workflows.
- Introduce deep test-drive scheduling and customer communication.
- Expand service-request workflows and after-sales reporting.
- Integrate external services where required for real-world automotive operations.
- Improve mobile accessibility and scale the CRM for larger datasets.

11. APPENDIX

A. Salesforce Modules

Module	Status / Evidence in supplied screenshot set
Vehicles	Visible in the WhatNext Vision Motors app screenshot.
Vehicle Dealers	Visible in application navigation.
Vehicle Customers	Visible in application navigation.
Vehicle Orders	Visible in application navigation.
Vehicle Test Drives	Visible in application navigation.
Vehicle Service Requests	Visible in application navigation.
Reports	Visible in application navigation.
Dashboards	Visible in application navigation.

B. Core Technologies / Salesforce Features

- SalesforceDeveloperEdition
- LightningAppBuilder
- SalesforceObjectsandRelationships
- Record-TriggeredFlow
- ApexandTriggers
- TriggerHandlers
- BatchApex
- ScheduledApex
- SynchronousandAsynchronousApex
- SalesforceReportsandDashboards

Source note: This project document was prepared using the supplied EventForce Salesforce project PDF as the formatting/content-structure reference, the three supplied Salesforce screenshots, and the available prior project details for WhatsNext Vision Motors. The provided Google Docs URL could not be fetched in this environment, so no unsupported content from that document has been added.

Thank You!!
